

Clarifier

To prevent turbid water

Application

Very small particles can cause turbidity in your spa water. Adding the Clarifier will help these small particles to conglomerate and to be held back in the filter.

Advantages

- Suitable for all types of filter, particularly for cartridge filters
- Increases the filtration effect
- Decreases the consumption of disinfectants
- Works independently of the water temperature and treatment method

Product description

Concentrated blue liquid clarifier
Contains: Cationic Polymers

Dosing recommendations

Add the required amount of Clarifier directly to the spa water undiluted, with the circulation pump running. Then leave the filter pump running for at least two hours. If the water is still turbid after 36 hours, then this is due to organic contaminants. These can be removed by raising the chlorine value and you can do this by adding a sachet of Spa Pure.

Important information

This product should be used solely for the purpose specified.

TIP: Before adding the disinfectant, please check the pH value with SpaTime test strips. If necessary, adjust to the correct value of 7.0 – 7.6 to ensure the best possible efficacy of the granules.
